Machine Learning Engineer · Software Engineer

Education

University of Colorado Boulder — B.S. Computer Science (*August 2021 - May 2025*)

- Relevant Coursework: Machine Learning, Artificial Intelligence, Advanced Data Science, Algorithms, Probability/Statistics, Operating Systems, Data Structures.

Flatiron School — Work-Study AI Engineering Apprenticeship (*March 2026 - Present*)

- Selective paid work-study program combining advanced AI/ML instruction with hands-on production product development (*see Experience*).

Technical Skills

Languages: Python, JavaScript/TypeScript, Go, PostgreSQL

ML/DS: PyTorch, TensorFlow, scikit-learn, XGBoost, pandas, NumPy, OpenAI, SHAP

Frameworks: React, FastAPI/Flask, Node.js, Tailwind, Next.js

Tools/Cloud: Docker, Git, GCP (BigQuery, Cloud Run, Cloud Scheduler), Supabase, GitHub Actions

Experience

AI/ML Product Developer Apprentice — Flatiron School (*March 2026 - Present*)

- Build production-focused AI applications end to end as part of a paid work-study apprenticeship: data pipelines, model evaluation, APIs, and frontend delivery.
- Ship weekly deliverables in a professional cohort, applying software engineering best practices (testing, CI/CD, code review) to real AI/ML products.

Freelance Web Developer — Boston, MA (*April 2018 - August 2021*)

- Built and launched 3+ client sites using HTML, CSS, and JavaScript with a focus on responsive UI and basic SEO.
- Gathered requirements directly from small-business clients and iterated through post-launch polish.

Selected Projects — (*All shown on drewboynton.com with RAG-Powered chatbot*)

Sports Edge — ML Prediction Platform (Python, scikit-learn, XGBoost, BigQuery, Supabase)

- Designed and built a fully automated sports prediction pipeline covering NBA, NFL, MLB, and the World Cup, generating daily game spread and win-probability predictions from self-trained models.
- Engineered a BigQuery feature warehouse (90K+ feature-snapshot rows) with daily refreshes orchestrated by Google Cloud Scheduler, Cloud Run, and GitHub Actions; predictions served to a live dashboard via Supabase.
- Built a Monte Carlo World Cup forecasting model (50K simulations per run) and league-specific XGBoost models, with automated validation, score syncing, and prediction-accuracy tracking.

LLM Advisor — AI-Assisted Trading System (Python, Gemini, Alpaca API, GitHub Actions)

- Built an automated paper-trading system combining a standard-deviation mean-reversion strategy with LLM market analysis: Gemini re-evaluates market context every 15 minutes and adjusts signal thresholds live.
- Engineered the full daily lifecycle — premarket ML bias models, a live execution loop with options risk guardrails, and end-of-day telemetry aggregation — orchestrated by Cloud Scheduler and GitHub Actions.

Senior Capstone — AI-Enabled Community Platform (React, Go, OpenAI/HuggingFace)

- Architected an AI-driven platform featuring resume parsing, chat summarization, and sentiment analysis tools using OpenAI and HuggingFace models.
- Ensured software quality with comprehensive tests and CI pipelines; documented full deployment and runbook procedures.

MatchPoint — AI-Powered Job Search Dashboard (TypeScript, Python, OpenAI, Vercel)

- Built a full-stack AI job search platform that parses resume PDFs, extracts candidate skills and preferences, and ranks job listings using embedding-based matching and custom scoring logic.
- Implemented a React/TypeScript frontend, FastAPI backend, Supabase auth/storage/Postgres layer, and automated job pipeline deployed through Vercel and GitHub Actions.

Additional Experience

Landscaping & Construction Crew Member — Boulder, CO (*Seasonal, May 2022 - September 2024*)

- Worked full seasonal schedules alongside coursework across 3 summers; served as the primary point of contact between clients and the owner, translating client requests into actionable crew plans.

Counter Server — Dunne's Ice Cream, York, ME (*Seasonal, May 2017 - August 2021*)

- Returned for 4 consecutive summers, becoming a trusted long-term employee with direct responsibility for daily customer service and closing operations.
